Nasledujúca rovnica  $2x^2 + 3y^2 - 4x + 12y + 2 = 0$ , určuje množinu bodov. Zistite, o akú množinu sa jedná.

**Riešenie.** Rovnicu upravujeme "na štvorce:"

$$2x^2 + 3y^2 - 4x + 12y + 2 = 0,$$

$$2x^2 - 4x + 3y^2 - 12y + 2 = 0,$$

$$2 \cdot (x^2 - 2x) + 3 \cdot (y^2 + 4y) + 2 = 0,$$

$$2 \cdot ((x - 1)^2 - 1) + 3 \cdot ((y + 2)^2 - 4) + 2 = 0,$$

$$2 \cdot (x - 1)^2 + 3 \cdot (y + 2)^2 = 12,$$

$$\frac{(x - 1)^2}{6} + \frac{(y + 2)^2}{4} = 1.$$

Podľa tvaru rovnice vidíme, že je to elipsa, so stredom  $S = (1, -2)$ , s hlavnou poloosou  $a = \sqrt{6}$  a vedľajšou poloosou  $b = 2$ . Obrázok je na ďalšej strane.
